

HEALTH AND SAFETY

OVERVIEW

No matter what your job is, whether you are a construction worker, an engineer, a carer, a secretary or a teacher; health and safety is important.

Occupational health and safety refers to programs, guidelines and procedures that protect the safety, welfare and health of any person engaged in work or employment.

The overall goal of any health and safety program is to create the ultimate safe working environment and to reduce the risk of accidents, injuries and fatalities on the job. Occupational health and safety also protects the health of customers and the general public as well as anyone else that might be affected by the particular working environment.

When health and safety procedures are followed correctly, they can help to prevent accidents and reduce the risk of employee injury and illness. They will also reduce costs such as sick leave, medical care and disability benefits.

Every organisation, no matter what they do, has a responsibility to uphold health and safety standards within the workplace. These guidelines are clearly outlined. If a company does not follow them, they can be liable for any damages or accidents that occur. Not only does the company have a legal and financial obligation to conform to health and safety standards, they also have a moral responsibility to care for the well-being of their employees.

At Etc. we offer a range of Health and Safety training courses that can help keep you and your business safe, or that provide an excellent springboard for a career in health and safety. These include accredited qualifications from awarding bodies, such as NEBOSH, IOSH, IRATA and ECITB.
